

The Euro Pacific International Value Separately Managed Account (SMA) is offered at Euro Pacific Capital and is intended to match the investment philosophy of our CEO, Peter Schiff. The actively managed product provides turn-key access to Peter's investment philosophy, attempting to generate income and capital appreciation over a long-term investment horizon by selectively choosing foreign companies with minimal exposure to the US Dollar.

Key Benefits:

- Turn-key access to Peter Schiff's international strategy
- Oversight from Peter Schiff, serving as Investment Committee Chairman
- Access to foreign markets not limited by the universe of domestic American Depository Receipts (ADRs)
- Transparency, with customization to individual investor needs
- Dedicated and disciplined portfolio management and quarterly rebalancing

Opening an Account

15 years in the Financial Services Industry
B.S. in Management, United States Air Force Academy, 2000; MBA, California State University, Long Beach; Chartered Financial Analyst (CFA)

FINRA Series 63, 65, & 87 licenses

Strategy Overview

The Euro Pacific International Value strategy seeks to provide capital appreciation and income by investing outside of the United States, using a top-down analysis to select the best countries and industries and a bottom-up analysis to select the best securities. The strategy seeks to diversify currency risk and takes a long-term investment view with low portfolio turnover.

Investment Process

The strategy adheres to a controlled investment process with Peter Schiff serving as the Investment Committee Chairman. Decisions regarding country, sector and stock allocation are presented to the Investment Committee for approval. The committee typically meets on a weekly basis to review the portfolio. The committee will decide upon country and sector focus, and utilize a bottom up approach to security selection by screening a universe of securities on their fundamentals, before settling upon approximately 25 to 40 securities for inclusion in the portfolio.

Sample Country Criteria

- Expected 1-2 year trade surplus
- Real interest rates exceed those of US
- Low debt-GDP ratio
- Favorable GDP growth estimates

Sample Industry Criteria

- Favorable growth rate
- Well-positioned against anticipated secular shifts in supply/demand
- Resource availability
- Favorable political and regulatory environment

Sample Security Criteria

- Favorable dividend yield
- Attractive valuation
- Strong balance sheet
- Superior management

Model Portfolio Composition

The model portfolios are balanced across Asia, Europe and the Resource Countries (Australia, New Zealand and Canada) to diversify currency risk, while using allocation between non-cyclical and cyclical industries to vary portfolio volatility.

Portfolio Rebalancing

Portfolios are rebalanced on a regular basis. Individual positions may be rebalanced when their current allocations exceed the original intended portfolio allocation, provided the Portfolio Manager determines the benefits of rebalancing exceed the additional cost of the transaction(s).

Performance of a \$250,000 Initial Investment, November 2009 - June 2018*

*This chart illustrates the performance of a hypothetical \$250,000 investment made in the Euro Pacific International Value SMA and MSCI AC World ex US Value Net Index at the time of inception on November 1, 2009 through June 30, 2018. It assumes reinvestment of dividends and capital gains, net of management fees. Clients cannot invest directly in the MSCI AC World ex US Value Net Index. This chart does not imply future performance.

Disclosures:

- 1) Euro Pacific Capital (EPC) launched the International Value SMA, Balanced Style on October 6, 2009 and changed the name to International Value SMA on December 31, 2013. Inception performance is calculated as of November 1, 2009. As of June 30, 2018, the International Value SMA included 217 accounts and is not meant to be representative of the overall performance for EPC.
- 2) Prior to June 30, 2013, the International Value SMA composite benchmark was the MSCI All Country World ex US Net Index. As of June 30, 2013, the benchmark was changed to the MSCI AC World ex US Value Net Index, as it more accurately compares to the International Value SMA composite.
- 3) Holdings represent the 10 largest holdings in the International Value SMA model portfolio as of June 30, 2018. These holdings are subject to change at any time without prior notice and individual account holdings may vary. The specific securities do not represent all the securities EPC has purchased, sold or recommended for clients over the past year. The reader should not assume that investments in securities listed above were or will be profitable.
- 4) Country and regional (Europe, Asia and Resource Countries) diversification represents the countries that EPC's International Value SMA portfolio was invested in as of June 30, 2018. These country and regional holdings are subject to change at any time without prior notice and individual account country and regional holdings may vary.
- 5) Sector diversification represents sector allocations in EPC's International Value SMA portfolio as of June 30, 2018. These sector allocations are subject to change at any time without prior notice and individual account sector allocations may vary.
- 6) Harmonic mean is a way of averaging multiples, and gives equal weight to each data point rather than greater weights to high data points. For example, with a simple arithmetic mean, companies with high price to earnings multiples would have a greater impact on the overall earnings multiple of the portfolio due to their large size relative to other companies with smaller multiples, whereas the harmonic mean would adjust for this impact by giving equal weight to both the company with the high multiple and the low multiple in calculating the overall price to earnings multiple for the portfolio.
- 7) Sharpe Ratio is a method used to calculate risk-adjusted performance. The Ratio is calculated by subtracting the risk-free rate from the rate of the return of the portfolio and dividing the result by the standard deviation of the portfolio returns.
- 8) The P/E (price to earnings) ratio is an indicator of how much investors are willing to pay for the opportunity to share in the company's future earnings potential. "FY1" refers to the P/E ratio calculated using the company's current year earnings as projected by analysts. "FY2" refers to the P/E ratio calculated using the company's earnings as projected by analysts two fiscal years forward.
- 9) The Price / Book ratio is used to compare a stock's market value to its book value and is commonly used to compare a company's valuation to peers within its industry.

Euro Pacific Capital is a division of A.G.P. / Alliance Global Partners, Member of FINRA and SIPC. This document has been prepared for the intended recipient only as an example of strategy consistent with our recommendations; it is neither an offer to buy or sell nor a solicitation of an offer to buy or sell any security or instrument or to participate in any particular investing strategy. Dividend yields change as stock prices change.
